SSRG’s (Structural Systems Repair Group) current project at 722 McMillan St. was previously condemned due to roof leaks which caused a collapse of portions of the building due to the poor structure. The building was not fit to be occupied and was a hazard to Firefighters, EMS and anyone that entered the building.

SSRG specializes in comprehensive structural services based on sound technical principles and technology-driven solutions. Our team of construction engineers brings to your project an in-depth knowledge of structural assemblies and systems with vast field experience and a proven ability in tackling complex situations. When the time comes, we are ready to do what it takes to extend the lifespan of your structure.
